future focus/sustainability:

Redirect "Enterprise zones" (in which the City of Los Angeles Community Redevelopment Agency engages in real estate speculation while allowing growing blight in the community) toward attracting and encouraging transit-oriented, pedestrian-friendly, mixed use, zero net energy, smart, compact, ecological-inspired architecture to reduce urban sprawl's carbon footprint and meet the 2030 mandated reduction of 80% - 90% of global greenhouse gases to mitigate global warming. Fully fund Tujunga-Pacoima Watershed projects to restore riparian and chaparral areas — especially in contaminated properties (closed landfills, and auto salvage yards) for green space (our lungs), ground-water recharge, potable water, flood control, recreation, community gardens, horse, bicycling and hiking trails. Convert impervious paved areas to pervious. Parks and recreation areas foster human development, strengthen public safety and security, promote health and welfare, bolster community self-image and instill a 'sense of place,' promote cultural solidarity, and facilitate community problem-solving. Maintain the mission of Hansen Dam to protect urban development from flooding and promote small water retention ponds, underground aquifers and cisterns. Establishment of governance based on bioregional-determined ecological conservation, watershed-based economic, political boundaries. Expand rail and jitney transit to compensate for the required trips now taken by private, gas-consuming vehicles — which will be phased off the roadways.

Politics are too often dominated by greed, corporatism, militarism and the narrow two-party duopoly. This has led humanity to ecological collapse and social and economic inequity. I will bring the ethical and moral imperatives of the Greens' Ten Key Values to Sacramento (Ecological Wisdom, Social Justice, Grass-roots Democracy, Nonviolence, Decentralization, Community-Based Economics, Feminism, Respect for Diversity, Personal and Global Responsibility, and Future Focus/Sustainability).
